

# ENERGY DATA LOGGING

Real data for real decisions

## REAL DATA, REAL DECISIONS.

Energy data logging keeps you informed with on-the-job, real-life power consumption, so you can make better decisions about power usage than ever before.

**How** can we achieve environmental and bottom line goals without accurate usage information?

**How** can we get where we're going if we don't know where we're coming from?

Our energy data logging feature is standard on all Thermo King MAGNUM PLUS® units starting in 2018 — and it tells you exactly how much power your reefer is using. All the time.

### ACCESSIBLE, 360° POWER USAGE DATA

Our energy data logging adds to your power consumption database:

- Logs energy usage during reefer operation
- Makes data accessible via the controller and data download
- Captures a 360° view of power usage including current power draw, trip power usage and lifetime power consumption for the reefer

### BETTER DATA, BETTER DECISIONS

Decisions can only be as sound as the data on which they're based. With Energy Data Logging, you'll know how much energy a reefer actually consumes, depending on how it's being used. That means you can make more accurate, informed decisions — and that's good for both the bottom line and sustainability goals.

### OPERATE RESPONSIBLY

- Knowing your actual carbon footprint helps in achieving your sustainability goals, and those of your customers
- Understanding power consumption gives you the opportunity to reduce it; less power means less energy and a smaller carbon footprint
